0 Allgemeines

Die Arbeiten am Institut konzentrieren sich auf astrophysikalische Fragestellungen im Submillimeter-, Fern- bis Nahinfrarot-Spektralbereich. Die Forschung umfasst drei Schwerpunkte: (*i*) die Astrophysik der interstellaren Materie, der Sternentstehung und der Kerne von Galaxien, (*ii*) die Entwicklung von Empfängersystemen, Spektrometern und Kameras und (*iii*) die höchstauflösende Laborspektroskopie an astrophysikalisch relevanten Molekülen und Molekül-Ionen.

1 Personal und Ausstattung

1.1 Personalstand

Direktoren und Professoren:

Prof. Dr. A. Eckart (geschäftsführender Direktor) [3546], Prof. Dr. J. Stutzki [3494], Prof. Dr. L. Labadie [3493] (Rufannahme, Dienstantritt Anfang 2011), Prof. Dr. R. Schieder [3568] (Emeritus), Prof. Dr. P. Schilke [1935], Prof. Dr. S. Schlemmer [7880], Prof. Dr. G. Winnewisser (Emeritus).

Wissenschaftliche Mitarbeiter:

Dr. M. Akyilmaz-Yabaci [7020], Dr. O. Asvany [3560], Dr. S. Falter [5933], Dr. S. Fischer [3552], Dr. M. Garcia Marin [7788], Prof. apl. Dr. T. Giesen [4529], Dr. U. Graf [4092], Dr. M. Justen [3489], Dr. N. Honingh [4528], Dr. C. Iserlohe [7791], Dr. K. Jacobs [3484], Dr. M. Justen [3489], Dr. F. Lewen [2757], Dr. H. S. P. Müller [4528], Dr. Y. Okada [1334], Priv.-Doz. Dr. habil. V. Ossenkopf [3485], Dr. P. Pütz [3769], Dr. M. Röllig [3485], Dr. F. Schlöder [5823], Dr. R. Simon [3547], Dr. G. Sonnabend [6147], Dr. C. Straubmeier [3552], Dr. N. Volgenau [3549],

2 Wissenschaftliche Arbeiten

2.1 Astrophysikalische Forschung

Großräumige Verteilung und Struktur des Interstellaren Mediums

Leiter: J. Stutzki

Bearbeiter: M. Cubick, M. Miller, V. Ossenkopf, M. Röllig, R. Simon

Zentrales Thema sind spektral hochauflösende Beobachtungen der globalen Verteilung des interstellaren Mediums (ISM) in der Milchstraße und in nahegelegenen Galaxien. Ziel ist es, die Struktur, Dynamik, den Energiehaushalt und die Chemie des ISM besser zu verstehen. Dazu werden physikalische Modelle photonendominierter Regionen (PDRs) entwickelt, sowie Methoden die statistischen Eigenschaften der beobachteten turbulenten Struktur zu charakterisieren. Interpretationsgrundlage sind Beobachtungen galaktischer und extragalaktischer Molekülwolken mit den NANTEN2, KOSMA, APEX, IRAM-30m, FCRAO Millimeter- und Submillimeterteleskopen. Diese Arbeiten sind komplementär zu den Messungen mit dem Herschel Satelliten und mit SOFIA (ab 2011).

Voraussichtlicher Abschlussstermin: offen

Fördernde Institutionen: MWIFT/NRW, DFG

Kooperationen: AIfA (Uni Bonn); Caltech, Pasadena, US; Cerro Calan Observatory, Universidad de Chile Ecole Normale Supérieure, Paris; Observatoire Bordeaux; Harvard-Smithsonian CfA; IRAM Grenoble/Granda; MPE; MPIfR; Nicolaus Copernicus Astronomical Center, Torun; OAN, Madrid; Peking University, China; SRON and Kapteyn Astronomical Institute Groningen; Sterrewacht Leiden; University of Nagoya; UNSW, Sidney, Australia.

HIFI/Herschel

Leiter: J. Stutzki

Bearbeiter: M. Akyilmaz, A. Eckart, T. Giesen, Y. Okada, V. Ossenkopf, M. Röllig, R. Simon

HIFI/Herschel führt spektral hochauflösende Beobachtungen von Linienstrahlung des interstellaren Mediums im bisher unerschlossenen Ferninfrarot-Bereich durch. Das Institut ist an den "key projects" aus garantierter Beobachtungszeit "The warm and dense ISM", "HEXOS: Herschel Observations of EXtra-Ordinary Sources: The Orion and Sgr B2 Star-Forming Regions", "PRISMAS: PRobing InterStellar Molecules with Absorption line Studies", "The HEXGAL (Herschel EXtraGALactic) Key Project: Physical and Chemical Conditions of the ISM in Galactic Nuclei" und dem *open-time key project* "HERMES: Herschel M33 Extended Survey" aus offener Beobachtungszeit beteiligt. Das Institut ist Standort des deutschen Herschel/HIFI-ICC (Instrument Control Center)-Knotens.

Voraussichtlicher Abschlussstermin: offen

Fördernde Institutionen: DLR/BMBF, DFG

Kooperationen: PI-Institutes: SRON Groningen; Caltech, Pasadena; CESR, Toulouse; Consortium: Centro Astronomico Yebes, Guadalajara; CSIC, Madrid; IAS Paris; IRAM Grenoble, John Hopkins University, Baltimore. JPL, Pasadena; Kapteyn Astronomical Institute, Groningen; LERMA Paris; Nicolaus Copernicus Astronomical Center, Torun; OAN Madrid; Sterrewacht Leiden;

[Cologne Database for Molecular Spectroscopy – CDMS

Leiter: S. Schlemmer, J. Stutzki

Bearbeiter: H.S.P. Müller, T. Giesen, C. Endres.

Die CDMS ist eine Internet/Browser zugängliche Datenbank der Molekülspektroskopie.

Zusammen mit der komplementären Datenbank am JPL, Pasadena, US) ist die meistgenutzte astrophysikalische Referenz zur Molekülspektroskopie. Sie ist im Rahmen von Herschel/HIFI eingebunden in das HSPOOT observing planning tool. Sie deckt spektroskopisch relevante Daten von gut 300 Spezies für $\frac{1}{2}$ den Frequenzbereich von mm-Wellen bis zum Infraroten ab.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: Grundausrüstung, DLR/BO

Das galaktische Zentrum - Sterne und Schwarzes Loch im Zentrum der Milchstraße

Leiter: A. Eckart

Bearbeiter: M. Bremer, R.M. Buchholz, D. Kunneriath, N. Sabha, C. Straubmeier, G. Witzel

Stellardynamische Untersuchungen belegen, daß sich im Zentrum unserer Milchstraße ein super-massives Schwarzes Loch mit einer Masse von 3 bis 4 Millionen Sonnenmassen befindet. In diesem Projekt werden die Dynamik der Sterne, der Staub- und Gasemission, möglicher Sternentstehung, sowie die Emission der kompakten Radioquelle Sagittarius A* im Nah- und Midinfrarotbereich untersucht. Ziel ist es die stellaren Populationen zu analysieren und deren Entstehung dort zu erklären, den Gas- und Staubeinfall, sowie die genaue Masse des Schwarzen Lochs sowie die 'Cusp'-Dynamik zu untersuchen. Simultane Radio-, Infrarot, Röntgen-Beobachtungen helfen den Ursprung der Ruhestahlung und der Strahlungsausbrüche zu untersuchen.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: Grundausrüstung

Quasare und ultraleuchtkräftige Galaxien - Dynamik und Sternentstehung in QSOs

Leiter: A. Eckart

Bearbeiter: S. Fischer, M. Garcia-Marin, C. Straubmeier, M. Bremer

Molekulares Gas und die Infrarotemission stellarer Populationen werden in Galaxien mit quasi-stellarem Kern und ultraleuchtkräftigen Galaxien untersucht. Dabei werden Interferometrie im Millimeterbereich, sowie Kartierungen und Spektroskopie mit Infrarot-Teleskopen im nahen Infrarotbereich eingesetzt. Die Untersuchungen werden auf Stichproben von nahen Galaxien mit aktivem Kern, sowie nahen Quasistellaren Objekten (QSOs) durchgeführt. Diese Beobachtungen dienen dazu die Dynamik von Gas und Sternen, sowie den Sternentstehungsprozess in diesen Objekten zu untersuchen. Aus diesen Messungen können dann Rückschlüsse auf die Entstehung und Entwicklung von Galaxien und deren aktiver Kerne gezogen werden.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: DFG SFB956

2.2 Instrumentierung

Stratospheric Observatory for Far-Infrared Astronomy (SOFIA) - Instrumentierung

Leiter: J. Stutzki

Bearbeiter: U. Graf, E. Honingh, K. Jacobs, M. Justen, P. Pütz, M. Röllig, F. Schlöder, M. Schultz, R. Simon, J. Stutzki, S. Wulff

Das deutsch-amerikanische Stratosphärenobservatorium für Infrarotastronomie (SOFIA), ein 2.7m-Teleskop in einer Boeing 747SP, hat nach reichlichen Verzögerungen nun 2010 den Beobachtungsbetrieb aufgenommen (first light: Ostern 2010; first science flights mit dem amerikanischen FORCAST-Instrument: Dezember 2010). Es wird durch regelmäßige Flüge in Höhen von bis zu 13 km der astronomischen Forschung den gesamten infraroten

Spektralbereich erschließen wird. Das I. Physikalisches Institut ist an der Entwicklung und am Bau der Heterodyn-Empfangssysteme GREAT beteiligt, dass für erste wissenschaftliche Flüge mit SOFIA im Frühjahr 2011 eingeplant ist.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: DLR/BO

Kooperation: MPIfR, MPS, DLR-WP, MPE, DSI/IRS Stuttgart, USRA at NASA Ames Research Center.

Entwicklung von Submm/FIR Detektoren für astronomische Anwendungen

Leiter: Karl Jacobs

Bearbeiter: E. Honingh, S. Wulff, M. Schmidt.

Das Kölner Mikrostruktur-Labor entwickelt SIS- und HEB-Mischer für astronomische Anwendungen im Submm- und FIR-Spektralbereich. Die Heterodyn-Detektoren reichen in der Empfindlichkeit nahe an die fundamentale quantenmechanische Grenze heran. Sie kommen an verschiedensten Observatorien zum Einsatz, insbesondere auf Herschel und SOFIA, an APEX, NANTEN2, KOSMA.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: DLR/BO, Verbundforschung/Astronomie

Kollaborationen: MPIfR Bonn; DLR Berlin; SRON Groningen; University of Cambridge, UK; Caltech/JPL, Pasadena, US.

Entwicklung von Submillimeter- und Terahertz-Empfängern

Leiter: Urs Graf

Bearbeiter: Bernhard Schmidt, Oliver Ricken, Michael Brasse

In diesem Projekt werden radioastronomische Empfänger entwickelt für den Einsatz an verschiedenen nationalen und internationalen Observatorien. Im Vordergrund steht der Aufbau von leistungsfähigen Multipixel-Empfängern. Der Zweifrequenz-Empfänger SMART (500 und 800 GHz) ist nun mit 16 Empfangskanälen am NANTEN2-Teleskop in der Atacama in Chile voll einsatzbereit. Gemeinsam mit dem MPIfR Bonn arbeiten wir weiter an der Entwicklung eines Zweifrequenz-Empfänger (300 und 500 GHz) und, gefördert von der Verbundforschung/Astronomie an einem 1.1 THz-Array-Empfänger für das APEX-Teleskop in Chile. Für das fliegende Observatorium SOFIA stellten wir den 1.9 THz Kanal von GREAT fertig.

Voraussichtlicher Abschlusstermin: offen

Fördernde Institutionen: DLR/BO, Verbundforschung/Astronomie

Kollaborationen: MPIfR Bonn, DLR Berlin, MPS Lindau, Universidad de Chile, University of Nagoya, Seoul National University, CSIRO Epping/Australien, Université de Neuchâtel, IAP Bern

Kölner Observatorium für Submillimeter Astronomie (KOSMA)

Leiter: J. Stutzki

Bearbeiter: M. Miller, V. Ossenkopf, M. Röllig, R. Simon

Das Institut betrieb bis Juni 2010 in Zusammenarbeit mit dem Argelder Institut für $\frac{1}{2}$ Astronomie der Universität Bonn das 3m-Submillimeterteleskop auf dem 3100 m hohen Gornergrat bei Zermatt in der Schweiz. Das Teleskop einschließlich aller Komponenten (außer der Kuppel) wurde im Sommer abgebaut und Tibet transportiert, wo es in Zusammenarbeit mit dem National Astronomical Observatory China, Peking, und einer Reihe

von Partner-Universitäten in Yangbajing, 90 km nördlich von Lhasa/Tibet in 4300m Höhe wieder aufgebaut wird. Dazu wurde ein Vertrag zwischen der Universität zu Köln und den National Astronomical Observatories der Chinesischen Akademie der Wissenschaften (NAOC) im Februar 2009 unterzeichnet.

Abschlussstermin: Sommer 2010

Fördernde Institutionen: MWIFT/NRW, International Foundation Jungfrauojoch & Gernergrat in Bern

Kollaborationen: AIFA, Universität Bonn; ETH Zürich; NAOC Peking/China; Universität Peking; China; Universität Nanjing, China.

NANTEN2

Leiter: J. Stutzki

Bearbeiter: U. Graf, N. Honingh, K. Jacobs, M. Miller, V. Ossenkopf, M. Röllig, R. Simon.

Dieses internationale Projekt kombiniert das japanische NANTEN2 (Nanten=jap. für Südhimmel) 4m submm-Teleskop mit am I. Physikalischen Institut entwickelten Empfängern (490/810 GHz), Spektrometern und Software zur Steuerung des Teleskops und der Datenaufnahme auf dem exzellenten Standort Pampa la Bola in 4865 m Höhe in der chilenischen Atacama Wüste. Aufgabe von NANTEN2 ist die großräumige Untersuchung von Molekülwolken der Milchstraße und von nahen Galaxien am bisher wenig erforschten Südhimmel komplementär zu den detaillierteren Beobachtungen größerer Teleskope. Die Aktivitäten konzentrieren sich auf Beobachtungen von Übergängen des CO Moleküls und des atomaren Kohlenstoffs bei Frequenzen von 100 bis 880 GHz, sowie die Interpretation der Daten mit Modellen der Chemie und Struktur der Wolken. Nach einer Reihe von Hard- und Software Verbesserungen, insbesondere des 800 GHz Kanals, sind nun systematische Beobachtungen mit dem SMART Empfänger in beiden hochfrequenten Empfangskanälen möglich. Die Haupt-Beobachtungsprojekte sind Messungen im galaktischen Zentrum, in massearmen und massereichen Sternentstehungsregionen der südlichen Milchstraße, in den beiden Magellanischen Wolken und in nahegelegenen Galaxien.

Voraussichtlicher Abschlussstermin: offen

Fördernde Institutionen: MWIFT/NRW

Kooperationen: Nagoya University, Japan; Osaka Prefecture University, Japan; Argelander Institut für Astronomie, Bonn; Seoul National University, Korea; ETH Zürich, Schweiz; University of New South Wales, Sydney, Australien; Universidad de Chile

Nahinfrarot Interferometrie - Beobachtungen und Instrumentierung zur Nahinfrarot-Interferometrie: VLTI-GRAVITY

Leiter: C. Straubmeier

Bearbeiter: C. Araujo-Hauck, A. Eckart, S. Fischer, C. Straubmeier, M. Wiest

Das I. Physikalisches Institut beschäftigt sich intensiv mit der Nutzung und Weiterentwicklung des Very Large Telescope Interferometer (VLTI) der Europäischen Südsternwarte auf Cerro Paranal in Chile. So wurden mit den beiden bereits in Betrieb befindlichen Kameras AMBER und VINCI unter anderem die ersten interferometrischen Signale von Quellen im galaktischen Zentrum aufgezeichnet. Zur weiteren Verbesserung der interferometrischen Fähigkeiten des VLTI finanzierte das Institut einerseits die Beschaffung, Erprobung und Inbetriebnahme der vierten Star-Separator Einheit (STS), und ist zudem an der Entwicklung, dem Bau und der Inbetriebnahme der interferometrischen Nahinfrarot-Kamera GRAVITY beteiligt. Mit Hilfe von GRAVITY soll das Licht von allen 4 Haupt-Teleskopen interferometrisch kombiniert und eine einzigartige astrometrische Präzision von 10 Mikrobogensekunden erreicht werden können. Der Hardware-Beitrag des Kölner Instituts zu GRAVITY besteht aus der Entwicklung, Fertigung und anschließenden Kommissionierung

der beiden Spektrometereinheiten des Kamerasystems.

Voraussichtlicher Abschlussstermin: 2013 (GRAVITY)

Fördernde Institutionen: HBFG, Verbundforschung

Kooperationen: MPE Garching, MPIA Heidelberg, Observatoire de Paris LESIA, European Southern Observatory ESO

James Webb Space Telescope - Instrumentierung für die Midinfrarot Kamera MIRI des neuen NASA-ESA Weltraumteleskops

Leiter: C. Straubmeier

Bearbeiter: A. Eckart, S. Fischer, M. Garcia-Marin, C. Straubmeier

Das James Webb Space Telescope (JWST) ist das zukünftige Weltraumteleskop von NASA und ESA für den nah- und midinfraroten Spektralbereich und direkter Nachfolger des überaus erfolgreichen Hubble Space Telescope (HST.) Aufgrund des äußerst straffen Zeitplans des mehr als eine Milliarde Euro teuren JWST Projekts bestritten die beiden beteiligten deutschen Forschungsinstitute, das MPI für Astronomie und das I. Physikalisches Institut der Universität zu Köln, die Kosten für die notwendigen Entwicklungen und Tagungsreisen seit dem Start des Projekts im Herbst 2003 bis zum Förderbeginn durch das DLR im April 2005 aus ihren jeweiligen Institutsmitteln. Der Hardware-Beitrag des Kölner Instituts zu MIRI besteht aus der Entwicklung, Fertigung und anschließenden Weltraumqualifizierung der mechanischen Halterung des niederauflösenden Doppelprismas des abbildenden Teils des Kamerasystems. Dieser Projektbeitrag wurde 2008 erfolgreich abgeschlossen. Parallel dazu ist das Institut Mitglied des MIRI Test-Teams und somit an der Entwicklung der Test-Prozeduren und der Durchführung der Tests des Verification Model und des Flight Model an den Rutherford Appleton Laboratory (RAL) nahe Oxford (UK) beteiligt. Ebenso sind die Kölner MIRI Mitarbeiter aktiv im MIRI Science Team engagiert.

Voraussichtlicher Abschlussstermin: 2014

Fördernde Institutionen: DLR

Kooperationen: Centre Spatial de Liege (CSL), Rutherford Appleton Laboratory (RAL), Commissariat l'Energie Atomique (CEA), Astrium

Nahinfrarot Interferometrie - Beobachtungen und Instrumentierung zur Nahinfrarot-Interferometrie: LINC-NIRVANA

Leiter: J. Zuther

Bearbeiter: A. Eckart, B. Franke, M. Horrobin, S. Rost, C. Straubmeier, E. Tremou, I. Wank, J. Zuther

In enger Zusammenarbeit mit dem MPI für Astronomie, dem Osservatorio Astrofisico di Arcetri und dem MPI für Radioastronomie ist das I. Physikalisches Institut maßgeblich an der Entwicklung und am Bau von LINC-NIRVANA, der interferometrischen Nahinfrarot-Kamera des Large Binocular Telescopes (Mt. Graham, USA) beteiligt. Die Hardware-Beiträge des Instituts umfassen den voluminösen Kamera-Dewar, den leistungsstarken 60 K Helium-Kühlkreislauf, und eine dreidimensionale Positioniereinheit zur Nachführung des Detektors des Fringe-and-Flexure-Trackers (FFTS) auf einer astronomischen Referenzquelle. Zusätzlich ist das Institut verantwortlich für die Entwicklung der computergestützten Echtzeit-Regelschleife zur Bild- und Piston-Analyse des FFTS.

Voraussichtlicher Abschlussstermin: 2014

Fördernde Institutionen: HBFG, Verbundforschung

Kooperationen: MPIA Heidelberg, MPIfR Bonn, Osservatorio Astrofisico di Arcetri (Italy)

Infrarot-Heterodynempfänger THIS

Leiter: G. Sonnabend

Bearbeiter: M. Sornig, P. Kroetz, D. Stupar

Beobertungskampagnen zu direkter Beobachtung von Wind und Temperaturen in den oberen Atmosphären von Mars und Venus wurden fortgesetzt. Der Empfänger THIS (‘Tunable Heterodyne Infrared Spectrometer’) wurde bei drei Beobachtungsläufen am McMath-Pierce Teleskop des National Solar Observatory in Arizona/USA eingesetzt, um die Venusatmosphäre bei verschiedenen Beobachtungsgeometrien zu untersuchen.

Fördernde Institutionen: DFG SO879/1-2

Kooperationen: Gruppe um Th. Kostiuik (GSFC/NASA), Francois Foreget (LMD Paris), Luca Montabone (Open University), Miguel Lopez-Valverde (IAA Granada)

A. and Boogert, A. and Bottinelli, S. and Cabrit, S. and Caselli, P. and Castets, A. and Cernicharo, J. and Codella, C. and Coutens, A. and ...: *Herschel*/HIFI observations of spectrally resolved methylidyne signatures toward the high-mass star-forming core NGC 6334I In: *Astron. Astrophys.* **521** (2010), Art. No. L43
- Bruderer, S. and Benz, A. O. and van Dishoeck, E. F. and Melchior, M. and Doty, S. D. and van der Tak, F. and Stäuber, P. and Wampfler, S. F. and Dedes, C. and Yildiz, U. A. and Pagani, L. and Giannini, T. and de Graauw, T. and Whyborn, N. and Teyssier, D. and Jellema, W. and Shipman, R. and Schieder, R. and Honingh, N. and Caux, E. and Bächtold, W. and Csillaghy, A. and Monstein, C. and Bachiller, R. and Baudry, A. and Benedettini, M. and Bergin, E. and Bjerkeli, P. and Blake, G. A. and Bontemps, S. and ...: *Herschel*/HIFI detections of hydrides towards AFGL 2591. Envelope emission versus tenuous cloud absorption In: *Astron. Astrophys.* **521** (2010), Art. No. L44
- Persson, C. M. and Black, J. H. and Cernicharo, J. and Goicoechea, J. R. and Hassel, G. E. and Herbst, E. and Gerin, M. and de Luca, M. and Bell, T. A. and Coutens, A. and Falgarone, E. and Goldsmith, P. F. and Gupta, H. and Kazmierczak, M. and Lis, D. C. and Mookerjee, B. and Neufeld, D. A. and Pearson, J. and Phillips, T. G. and Sonnentrucker, P. and Stutzki, J. and Vastel, C. and Yu, S. and Boulanger, F. and Dartois, E. and Encrenaz, P. and Geballe, T. R. and Giesen, T. and Godard, B. and Gry, C. and Hennebelle, P. and ...: Nitrogen hydrides in interstellar gas. *Herschel*/HIFI observations towards G10.6-0.4 (W31C) In: *Astron. Astrophys.* **521** (2010), Art. No. L45
- Gupta, H. and Rimmer, P. and Pearson, J. C. and Yu, S. and Herbst, E. and Harada, N. and Bergin, E. A. and Neufeld, D. A. and Melnick, G. J. and Bachiller, R. and Bächtold, W. and Bell, T. A. and Blake, G. A. and Caux, E. and Ceccarelli, C. and Cernicharo, J. and Chattopadhyay, G. and Comito, C. and Cabrit, S. and Crockett, N. R. and Daniel, F. and Falgarone, E. and Diez-Gonzalez, M. C. and Dubernet, M.-L. and Erickson, N. and Emprechtinger, M. and Encrenaz, P. and Gerin, M. and Gill, J. J. and Giesen, T. F. and ...: Detection of OH⁺ and H₂O⁺ towards Orion KL In: *Astron. Astrophys.* **521** (2010), Art. No. L47
- Hartogh, P. and Blecka, M. I. and Jarchow, C. and Sagawa, H. and Lellouch, E. and de Val-Borro, M. and Rengel, M. and Medvedev, A. S. and Swinyard, B. M. and Moreno,

- R. and Cavalié, T. and Lis, D. C. and Banaszekiewicz, M. and Bockelée-Morvan, D. and Crovisier, J. and Encrenaz, T. and Küppers, M. and Lara, L.-M. and Szutowicz, S. and Vandenbussche, B. and Bensch, F. and Bergin, E. A. and Billebaud, F. and Biver, N. and Blake, G. A. and Blommaert, J. A. D. L. and Cernicharo, J. and Decin, L. and Encrenaz, P. and ...: First results on Martian carbon monoxide from *Herschel*/HIFI observations In: *Astron. Astrophys.* **521** (2010), Art. No. L48
- Hartogh, P. and Jarchow, C. and Lellouch, E. and de Val-Borro, M. and Rengel, M. and Moreno, R. and Medvedev, A. S. and Sagawa, H. and Swinyard, B. M. and Cavalié, T. and Lis, D. C. and Blecka, M. I. and Banaszekiewicz, M. and Bockelée-Morvan, D. and Crovisier, J. and Encrenaz, T. and Küppers, M. and Lara, L.-M. and Szutowicz, S. and Vandenbussche, B. and Bensch, F. and Bergin, E. A. and Billebaud, F. and Biver, N. and Blake, G. A. and Blommaert, J. A. D. L. and Cernicharo, J. and Decin, L. and Encrenaz, P. and ...: *Herschel*/HIFI observations of Mars: First detection of O₂ at submillimetre wavelengths and upper limits on HCl and H₂O₂ In: *Astron. Astrophys.* **521** (2010), Art. No. L49
- de Val-Borro, M. and Hartogh, P. and Crovisier, J. and Bockelée-Morvan, D. and Biver, N. and Lis, D. C. and Moreno, R. and Jarchow, C. and Rengel, M. and Szutowicz, S. and Banaszekiewicz, M. and Bensch, F. and Blecka, M. I. and Emprechtinger, M. and Encrenaz, T. and Jehin, E. and Küppers, M. and Lara, L.-M. and Lellouch, E. and Swinyard, B. M. and Vandenbussche, B. and Bergin, E. A. and Blake, G. A. and Blommaert, J. A. D. L. and Cernicharo, J. and Decin, L. and Encrenaz, P. and de Graauw, T. and ...: Water production in comet 81P/Wild 2 as determined by *Herschel*/HIFI In: *Astron. Astrophys.* **521** (2010), Art. No. L50
- Hily-Blant, P. and Maret, S. and Bacmann, A. and Bottinelli, S. and Parise, B. and Caux, E. and Faure, A. and Bergin, E. A. and Blake, G. A. and Castets, A. and Ceccarelli, C. and Cernicharo, J. and Coutens, A. and Crimier, N. and Demyk, K. and Dominik, C. and Gerin, M. and Hennebelle, P. and Henning, T. and Kahane, C. and Klotz, A. and Melnick, G. and Pagani, L. and Schilke, P. and Vastel, C. and Wakelam, V. and Walters, A. and Baudry, A. and Bell, T. and Benedettini, M. and Boogert, A. and Cabrit, S. and Caselli, P. and ...: Nitrogen hydrides in the cold envelope of IRAS 16293-2422 In: *Astron. Astrophys.* **521** (2010), Art. No. L52
- Muzic, K. and Eckart, A. and Schödel, R. and Buchholz, R. and Zamaninasab, M. and Witzel, G.: Comet-shaped sources at the Galactic center. Evidence of a wind from the central 0.2 pc In: *Astron. Astrophys.* **521** (2010), Art. No. A13
- Gratier, P. and Braine, J. and Rodriguez-Fernandez, N. J. and Schuster, K. F. and Kramer, C. and Xilouris, E. M. and Tabatabaei, F. S. and Henkel, C. and Corbelli, E. and Israel, F. and van der Werf, P. P. and Calzetti, D. and Garcia-Burillo, S. and Sievers, A. and Combes, F. and Wiklind, T. and Brouillet, N. and Herpin, F. and Bontemps, S. and Aalto, S. and Koribalski, B. and van der Tak, F. and Wiedner, M. C. and Röllig, M. and Mookerjee, B.: Molecular and atomic gas in the Local Group galaxy M 33 In: *Astron. Astrophys.* **522** (2010), Art. No. A3
- V. Lattanzi, P. Thaddeus, M. C. McCarthy, and S. Thorwirth: Laboratory detection of protonated SO₂ in two isomeric forms In: *J. Chem. Phys.* **133** (2010), 194305
- Sano, H. and Sato, J. and Horachi, H. and Moribe, N. and Yamamoto, H. and Hayakawa, T. and Torii, K. and Kawamura, A. and Okuda, T. and Mizuno, N. and Onishi, T. and Maezawa, H. and Inoue, T. and Inutsuka, S. and Tanaka, T. and Matsumoto, H. and Mizuno, A. and Ogawa, H. and Stutzki, J. and Bertoldi, F. and Anderl, S. and Bronfman, L. and Koo, B.-C. and Burton, M. G. and Benz, A. O. and Fukui, Y.: Star-forming Dense Cloud Cores in the TeV Gamma-ray SNR RX J1713.7-3946 In: *Astrophys. J.* **724** (2010), 59-68
- Torii, K. and Kudo, N. and Fujishita, M. and Kawase, T. and Okuda, T. and Yamamoto, H. and Kawamura, A. and Mizuno, N. and Onishi, T. and Machida, M. and Takahashi,
